

REFERENCES AND SUGGESTIONS FOR FURTHER READING

- Forman S. Acton, *Numerical Methods That Work* (Harper & Row, 1970); corrected edition, Mathematical Association of America (1990). Chapter 18 discusses solutions to Laplace's equation using the relaxation method and alternative approaches.
- John W. Belcher and Stanislaw Olbert, "Field line motion in classical electromagnetism," *Am. J. Phys.* **71**, 220–228 (2003). The authors discuss some of the difficulties with field lines that change in time, and suggest a procedure where the local direction of motion of a field line is in the same direction as the Poynting vector.
- Charles K. Birdsall and A. Bruce Langdon, *Plasma Physics via Computer Simulation* (McGraw-Hill, 1985).
- D. H. Choi and W. J. R. Hoefer, "The finite-difference-time-domain method and its application to eigenvalue problems," *IEEE Trans. Microwave Theory and Techniques* **34**, 1464–1469 (1986). The authors use Yee's algorithm to model microwave cavity resonators.
- David M. Cook, *The Theory of the Electromagnetic Field* (Prentice Hall, 1975). One of the first books to introduce numerical methods in the context of electromagnetism.
- Robert Ehrlich, Jaroslaw Tuszynski, Lyle Roelofs, and Ronald Stoner, *Electricity and Magnetism Simulations: The Consortium for Upper-Level Physics Software* (John Wiley, 1995).
- Richard P. Feynman, Robert B. Leighton, and Matthew Sands, *The Feynman Lectures on Physics*, Vol. 2 (Addison-Wesley, 1963).
- T. E. Freeman, "One-, two-, or three-dimensional fields?," *Am. J. Phys.* **63**, 273–274 (1995).
- R. L. Gibbs, Charles W. Beason, and James D. Beason, "Solutions to boundary value problems of the potential type by random walk method," *Am. J. Phys.* **43**, 782–785 (1975).
- R. H. Good, "Dipole radiation: Simulation using a microcomputer," *Am. J. Phys.* **52**, 1150–1151 (1984). The author discusses a graphical simulation of dipole radiation.
- David J. Griffiths, *Introduction to Electrodynamics*, 3rd ed. (Prentice Hall, 1999). A classic undergraduate text on electromagnetism. See also David J. Griffiths and Daniel Z. Uvanovic, "The charge distribution on a conductor for noncoulombic potentials," *Am. J. Phys.* **69**, 435–440 (2001); O. F. de Alcantara Bonfim and David Griffiths, "Comment on 'Charge density on a thin straight wire, revisited,' by J. D. Jackson [*Am. J. Phys.* **68** (9), 789–799 (2000)]," *Am. J. Phys.* **69**, 515–516 (2001); and O. F. de Alcantara Bonfim, David J. Griffiths, and Sasha Hinkley, "Chaotic and hyperchaotic motion of a charged particle in a magnetic dipole field," *Int. J. Bifurcation and Chaos* **10**, 265–271 (2000).
- R. W. Hockney and J. W. Eastwood, *Computer Simulation Using Particles* (McGraw-Hill, 1981).
- Steven E. Koonin and Dawn C. Meredith, *Computational Physics* (Addison-Wesley, 1990). See Chapter 6 for a discussion of the numerical solution of elliptic partial differential equations of which Laplace's and Poisson's equations are examples.
- William M. MacDonald, "Discretization and truncation errors in a numerical solution of Laplace's equation," *Am. J. Phys.* **62**, 169–173 (1994).
- William H. Press and Saul A. Teukolsky, "Multigrid methods for boundary value problems I," *Computers in Physics* **5** (5), 514 (1991).

- Edward M. Purcell, *Electricity and Magnetism*, 2nd ed. (Berkeley Physics Course, Vol. 2, McGraw-Hill, 1985). A well-known text that discusses the relaxation method.
- John R. Reitz, Frederick J. Milford, and Robert W. Christy, *Foundations of Electromagnetic Theory*, 3rd ed. (Addison-Wesley, 1979). This text discusses microwave cavity resonators.
- Matthew N. O. Sadiku, *Numerical Techniques in Electromagnetics*, 2nd ed. (CRC Press, 2001).
- A. Taflove and M. E. Brodwin, "Numerical solution of steady state electromagnetic scattering problems using the time-dependent Maxwell equations," *IEEE Trans. Microwave Theory and Techniques* **23**, 623–630 (1975). The authors derive the stability conditions for the Yee algorithm.
- P. B. Visscher, *Fields and Electrodynamics* (John Wiley & Sons, 1988). An intermediate level text that incorporates computer simulations and analysis into its development.
- P. J. Walker and I. D. Johnston, "Computer model clarifies spontaneous charge distribution in conductors," *Computers in Physics* **9**, 42 (1995).
- Gregg Williams, "An introduction to relaxation methods," *Byte* **12** (1), 111–124 (1987). The author discusses the application of relaxation methods to the solution of the two-dimensional Poisson's equation.
- K. S. Yee, "Numerical solution of initial boundary value problems involving Maxwell's equations in isotropic media," *IEEE Trans. Antennas and Propagation* **14**, 302–307 (1966). Yee uses the discretized Maxwell's equations to model the scattering of electromagnetic waves off a perfectly conducting rectangular obstacle.
